

PLUSYSTEM

Often we combine our way of life to the world surrounding us sending back the dreams and the desires to improve quality in our lifework. It can happen to reverse this "rule", when industry works seriously for man. This is the case of PLUSYSTEM, a program of office furniture, thought for quality of life in the ambiental context of work. The project privileged very careful ergonomic concepts and constructive technological innovations, that consents, for example, to produce, in limited series too, unique tops for desks or tables, in big sizes, in the desired shapes and colour; naturally besides of all of the system for office furniture, extremely articulate for base's components, complementary and choices of colour. A product of handcraft's care built with technology and industrial costs.

FOUR STEPS IN A PROJECT

Throug the pages of this catalogue, we can appreciate the versatily, the quality and the elegance of PLUSYSTEM. A system of furniture for the office composed by desks completely cabled, tables, chairs, cabinets equipped partition and accessories that allow the organization of functional work-station.

THE EQUIPPED PARTITION

Realized in melamine plated on both sides the equipped partition is available in other 300 different versions. The finishing and technical details have been cared particularly: the carrying structure completely bordered with double profile anti-dust, doors with opening 180, adjustable feet, base in PVC for cable passage. Plate inside shelves, predisposed for suspended file, (mold 33 and 39 cm.).

THE PARTITION WALL

PLUSYSTEM's partition wall, characterized by a self standing structure in steel coated with zinc, has a great easiness of assembly not requiring use of the panels to the structure allows the models of the wall to be at any time interchangeable; possible is also the coupling of shelves. PLUSYSTEM's has important technological aspects as 40DB of soundproofing level.

THE EXECUTIVE

The intrinsic validity of the project allows to obtain prestigious solutions of directional level making a simple choice in the walnut finishing.

THE RECEPTION

This series includes two kinds of elements , one center section 360 cmin lenght , and side sections 265 cm- in lenght, and side sections 265 cm in lenght for use on the left and right hand sides. . All sections are completely cable ready with canals and one or two pedestals to conceal the wires. This feature , combined with a wide work top , provides for future integration of video terminals. One of the most speacial characteristics of our Reception units is that the work surface is formed with a single seamless piece instead of joining multiple pieces. This is possible thanks to our manufacturing process with innovative machines. The work surface height is a conveneient 110 cm.

THE CABINETS

The constructive and chromatic characteristics of cabinets are almost identical to the equipped partition; the unique difference is the cylinder block completed of two side panels. They are equippable with doors or glass doors with frame in grey anthracite aluminium, indipendently to the colour of top and facades. Maximum fitting, available in 32, 52 and 102 cm. the widths - 82,99, 152, 222 cm. (top already included) the heights - 48 cm. the deepth at the wall and 51 cm. the deepth in the room's center. The desks, in all of their shapes and dimensions, permit infinite solutions of continuity of composition. It is possible to separate the working places with divider modesty panels and multiply the working floors with shelves to be hooked on the modesty panels.

THE DESKS

The desks project contains in the search's desire of the ideal dimention of working surface. Unpublished and ergonomic shapes thanks to an innovative technical construction. The surfaces are spacious and continuous between the base top and typist, total absence of edges also pedestal. Supporting frame in folder sheet and leg in cast-iron. Pedestal in sheet, available on casters or fixed as supporting base; depth from 47 and 60 cm., three drawers or a drawer with file, equiptable with the classical solutions of composition: 75, 140, 150, 160 and 180 cm. the lenghts - 75,81,150 and 157 cm. the deepths - the height cm. 72. Six, the available shapes.

TECHNICAL DETAILS

The technical details, the analysis of the materials , and the examination of the finished piece are not only subjects evaluated on our products. Starting with these points , we are better prepared to enter the spirit of Plusystem , however. Absolute requirements of robustness and security are imperative to a good operative office system. Plusystem was designed this way, without compromise. For resistance to fire in the wall partition, for example, we make use of " class 1"panels , and "class O" for the support structure. Skinplate panels that offer even greater resistance to fire available upon request.

The Plusystem quality is not an option, it is built into every unit. Thanks to this quality , our desks have easily obtained the declaration of conformity to the legislative decree number 626 of September 19 , 1994 for the finishings in light grey , light green , natural maple, beech and walnut . Desks , component cabinets and pedestals have been submitted to a great number of proofs according to the " UNI " regulations and have surpassed them with excellent results. This is a welcome assurance for those who are not yet familiar with us.
